## FOREWORD

The Iowa Crop and Livestock Reporting Service is the Iowa unit of a nation-wide organization which is entrusted with the responsibility of operating a standard statistical service for agriculture. The Division of Agricultural Statistics is a division of the Iowa State Department of Agriculture working in cooperation with the Agricultural Marketing Service of the United States Department of Agriculture. The year 1939 marked the one-hundredth anniversary of the collection of statistics of agriculture in the United States.

The general program of the Iowa Crop and Livestock Reporting Service is to meet the public needs and demands for summary data of a historical nature and for current statistical information of agricultural production in Iowa and the United States.

In recent years, there has been an increasing demand from agricultural organizations, commercial interests, teachers, legislators, and county, state and governmental agencies for agricultural data showing the trends of change in counties. Little has been done in the past to make available data for each county over an extended period of time. So urgent is the need for county data that some organizations have assembled such information at considerable cost. It is in response to these needs that this series is being issued.

The county data herein offered have been assembled from existing State and Federal documents and reports, under the supervision of Norman V. Strand, State-wide Work Projects Administration Supervisor of Agricultural Economics and Statistics projects. This is a report of work completed on Official Project 65-1-72-155 of the Work Projects Administration. Official Project 665-72-3-36 furnished the material for Tables 28 and 30.

The Iowa Agricultural Extension Service participated in the preparation of the materials in this report. Selected data from the files of the Iowa Agricultural Experiment Station have been released for publication in this series. Special credit is given to the Iowa assessors and tax officials who collect data on crops and livestock as required under the Iowa laws. Without these data by townships and counties detailed agricultural statistics would be less accurate and less complete.

Leslie M. Carl, Director  
Division of Agricultural Statistics

Des Moines, Iowa  
September, 1940

## IOWA AGRICULTURAL STATISTICS - MONONA COUNTY

Monona County was established in 1851 from territory originally included in Benton County. The name is of Indian origin. In 1865 a tier of townships which were originally embraced in Monona County were detached and given to Crawford County.

The first permanent settler was Isaac Ashton, who, in 1852, made a claim about two miles north of the present site of Onawa. Josiah Sumner located near-by and, in the same year, Aaron Cook settled on the bank of the Missouri River, about seven miles southwest of Onawa. This place was later known as Cook's Landing.

In 1854, Charles B. Thompson, a Mormon leader with several followers, settled on Soldier Creek. During the year, he was joined by about fifty Mormon families who preëmpted several thousand acres of the best lands in that vicinity. Thompson laid out a town called Preparation. A quarrel arose among the members of the colony, litigation followed, and the members gradually disposed of their lands and moved to other parts.

The county government was formally organized in 1854 and the county business was transacted at the Mormon town of Preparation. In the fall of 1854, the new town of Ashton was selected for the county-seat.

In 1857, the Monona Land Company laid out the town of Onawa and in 1858 a vote of the people located the county-seat at that place.

The Sioux City and Pacific Railroad was the first road built through the county. 1/

### Area

Monona County contains 686 square miles 2/, or 439,040 acres. Of this number, 417,119 acres are listed as farm lands. 3/ There are 19 townships in the county and it ranks fifteenth in point of size in the State. Winneshiek County has the same area.

### Climate

The average temperature for the 41 years between 1889 and 1930 was 48.0 degrees. The average precipitation for the 55 years between 1875 and 1930 in this county was 31.35 inches, and the growing season averaged 159 days between the dates of the killing frosts of May 2 and October 8, recorded from 1900 to 1930. 4/

4/ United States Weather Bureau. Climatic Summary of the United States from establishment of stations to 1930, inclusive. Section 50--Western Iowa. pp. 6, 15, 19. 1933.

### Population

The first State Census, 1854, credited Monona County with 222 inhabitants. There has been no spectacular population growth, but a steady increase has continued and in 1930 there were 18,213 residents in the county. It has a density of 27 persons per square mile, as compared with the State density of 44. The following table shows the number of inhabitants at 10-year enumerations:

<u>Year</u>	<u>Inhabitants</u>	<u>Urban</u>	<u>Rural</u>
1860	862	-	-
1870	3,654	-	-
1880	9,055	-	-
1890	14,515	-	-
1900	17,980	5,108	12,962
1910	16,633	5,689	10,944
1920	17,125 <sup>5/</sup>	6,530 <sup>6/</sup>	10,595
1930	18,213 <sup>7/</sup>	7,061	11,152
1935	-	-	10,264 <sup>8/</sup>

The foreign born and native white of foreign born or mixed parentage content of Monona County in 1930 was 4,300 or 23.6 percent of the total population. Of this number, those of Danish descent led with 1,013, the Norwegians came next with 970, the Germans followed with 509 and the Swedes had 480. Other nationalities had much smaller representations, <sup>9/</sup>

### Cooperatives

In 1937 there were eight cooperative institutions in operation in this county—six elevators and two petroleum plants.

As a whole, they had 728 members of which 510 were active, and 3,040 persons did business with the eight concerns. The selling cooperatives had a business volume of \$1,233,090 and the purchasing cooperatives transacted \$179,010 worth of business.

Cooperatives may both buy and sell or they may perform one or the other function exclusively. Purchasing cooperatives buy non-farm commodities for distribution to their members and patrons, and selling cooperatives market farm commodities for their members and patrons. 10/

### Fruit

The largest apple record, both as to the number of trees and production, was in 1909. The record shows that 59,876 trees and 106,125 bushels were reported for that year. In 1934, there were 8,416 trees and 4,588 bushels reported. Peaches have never been of any consequence. The largest number of plum

10/ Unpublished data from: Omaha Farm Credit Administration and Iowa State College.

trees were reported in 1894, and the largest production in 1909. There were 25,561 trees and 3,981 bushels reported in these years. Cherries had a record of 6,213 trees and 1,224 bushels in 1909. Grapes had 19,643 vines in 1894 and 74,395 pounds in 1909. These are the years of greatest numbers and greatest production respectively. 11/

#### Note Regarding Yields of Corn

The crop assessors' statistical breakdown for corn acreage is as follows: (1) all corn, (2) corn husked for grain, (3) corn cut for silage, (4) corn cut for fodder and (5) corn hogged off. A total production is given for each farm which includes only that actually husked. In getting county totals of production the acreage other than that husked is multiplied by the yield (derived by dividing total bushels corn husked by total acres husked) and added to summations of individual farm productions shown as husked. This assumes that acreage not husked would have produced the same yield as that actually husked.

In 1934 and 1936, both poor crop years, separate estimations of corn yield on acreage not husked were made by the state assessors' office because it was felt that farmers on those years would select their best acreages for husking and cut or hog off the rest, which would have a different and lower yield. This separate yield estimation was then multiplied by the acreage no husked and the total added to that reported as husked.

This was done by counties only and not by townships. The township yields for these two years, then, are somewhat high since they are based only on acreage husked for grain and bushels husked. The total corn acreage is shown by township with this yield and any attempt to multiply it by the acreage shown to get total production will result in a too high figure. The county summary table figures for corn yield in 1934 and 1936 have been adjusted for poorer yields on that acreage not husked and these yields may legitimately be multiplied by the acreages shown there to arrive at total productions for the county.

In all other years actual township productions may be derived from the yield and acreage figures shown in the tables since corn yield has been assumed to be equal in all utilizations. The county yield and township yields are, therefore, consistent in all years except 1934 and 1936.

1939	36970	11075	7698	950	5844	68357

The figures in this table for the years 1870-1935 inclusive have been derived from the Federal Censuses for Iowa. These enumerations have been made as of different dates. Some enumerations were for a base date of January 1, others for a base date of April 1, and others for June 1.

The census enumerations made in 1920, 1925 and 1935 were for January 1. For comparability the enumerations made for the base dates of April 1 and June 1 were adjusted to an equivalent January 1 base. This adjustment procedure places the livestock data of the above table on the inventory date of January 1.

The figures for 1936, 1937, 1938 and 1939 for all cattle and milk cows are estimates of the Division of Agricultural Statistics of the Iowa Department of Agriculture and those for horses, mules, hogs and sheep are adjusted state farm assessor's figures.

The adjusted county figures for horses, mules, hogs and sheep for the last four years in the table are more nearly accurate than those in Table 24 and comparison with these figures will provide an estimate of the bias displayed by the unadjusted state farm assessor's figures.

Includes Milk Cows.

The statistics in this table are biased downward. They are printed only to permit inter-township and inter-annual comparisons. Unless townships are equal in size, comparisons may not be directly made. It is assumed that individual assessors are subject to approximately the same bias. Compare Table 23 for magnitude of the bias.
